Layers of Soil

Grade II Activity

It is no secret that children and soil pretty much go hand in hand. Children usually love to find a dirt patch and make some mud and dig or romp in it. While they might find playing in it fun, they may be surprised to learn that soil is the basis for life and growth! Teaching children why "Caring for the Planet Starts from the Ground". Children will learn that without soil we would not be able to grow crops or other useful plants, support livestock, or have materials for building shelter! Healthy soils also store and filter water, recycle nutrients and help us to deal with the negative effects of climate change by storing large amounts of carbohydrates. Soils are named and classified based on their horizons. The soil profile has four distinct layers: 1) O horizon 2) A horizon 3) Subsoil 4) Soil base. The O horizon has freshly decomposing organic matter - humus - at its

VALUE OF THE MONTH
JUSTICE

Justice

That justice is a blind goddess
Is any thing to which we black are wise;
Her bandage hides tow festering sores
That onces once perhaps were eyes

Neel Prince, V-A

Poem on Justice

Justice is something we all employ,
Unaffected by hate or joy.
Giving others a helping hand,
Not to benefit one, but the land.

Unbiased yet undefined,
Something to seek and try to find.
What is fair and what is good?
Strive to do as we should.

Unknow yet known by every friend,
To give each a hand to lend.
Justice is for and all,
To assist each should they stand or fall.

Aryan Ambre, V-A

Climate Actions

Effects of climate change

- Climate change is affecting every country on every continent
- It is disturbing national economies and affects life
- Weather patterns are changing
- Sea levels are rising
- Weather events are becoming more extreme

Causes

- Carbon dioxide levels another greenhouse gases in the atmosphere rose to new records in 2019.
- It is estimated that logging, clear-cutting, fires and other form of forest degradation contribute up to 20% of global carbon emissions
- Other human activities that generate air pollution include fertilizer use, livestock production and industrial processes.

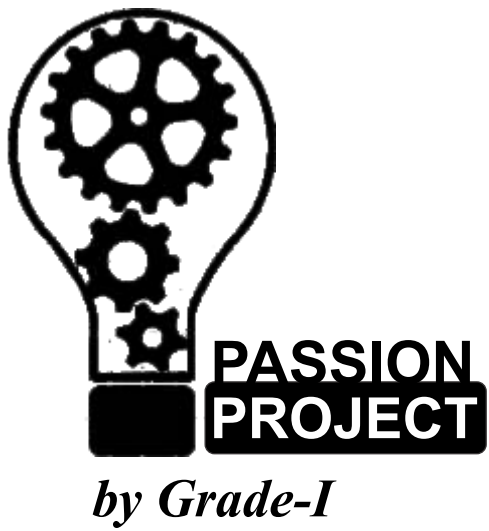

Solutions

- Forego fossils fuels
- Powering home with solar or wind is one of the best ways to fight climate change
- Choose local food when possible and buy food with less packaging
- Save Water
- Choose a fuel efficient vehicle
- Recycling can help stop climate change
